

Vibe2Cloud — One Pager

The Problem

Teams prototype fast with AI app builders, then stall at the last mile: getting that prototype onto real, production-grade cloud infrastructure without a dedicated DevOps hire. The gap between "it works on my laptop" and "it is live, secure, and scalable" is where most momentum dies.

The Solution

Vibe2Cloud takes a working prototype and stands up a serverless AWS backend around it — auth, database, storage, and APIs — in minutes, not weeks. You keep building; we handle the cloud.

Why Now

Trend	Impact
AI app builders exploding	More prototypes need a real backend
Serverless is default	Costs scale to zero, no servers to manage
Solo founders + small teams	Nobody wants to hire DevOps on day one

Traction

- Private beta with early design partners
- Built entirely on AWS serverless primitives
- Repeatable, Terraform-defined deployments

Ask

We are looking for design partners and early feedback. Reach out to explore how Vibe2Cloud can take your prototype to production.
